

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of claims:

1. (Currently amended) A stack structure of a fuel cell, comprising:
a plurality of separators of a fuel cell; [[and]]
a protruding portion which is formed on an end portion of each of the separators, and the protruding portion has a tip portion that is to contact a reference portion of an assembly jig, without contacting a surface on which the protruding portion is formed, during assembly of the fuel cell; and
a plurality of cells each of which comprises the separators and an Membrane-Electrode Assembly, wherein the protruding portion protrudes in a direction perpendicular to a cell stacked direction;
wherein the protruding portions of the separators adjacent to each other are formed so as to be displaced with respect to each other in the cell stacked direction and offset from one another in the direction perpendicular to the cell stacked direction.
2. (Canceled)
3. (Currently amended) The stack structure according to claim [[2]] 1, further comprising:
a plurality of sealants each of which is provided between the separator and the separator, or between the separator and the Membrane-Electrode Assembly when the cells are stacked, wherein the protruding portion has a predetermined height such that the sealant does not come out from the tip portion.
4. (Original) The stack structure according to claim 3, wherein the predetermined height of the protruding portion is 0.3 mm or more.

5. (Currently Amended) The stack structure according to claim ~~2~~1, wherein the protruding portions of the separators adjacent to each other are formed so as not to overlap with each other in a cell stacked direction.

6. (Canceled)

7. (Original) The stack structure according to claim 1, wherein each of the separators has a rectangular shape, and the protruding portion is formed in a vicinity of a corner portion of the separator.

8. (Original) The stack structure according to claim 1, wherein a plurality of the protruding portions is formed on each of the separators.

9. (Original) The stack structure according to claim 1, wherein a cross section of the protruding portion is substantially circular in a direction perpendicular to a cell stacked direction.

10. (Original) The stack structure according to claim 1, wherein a cross section of the protruding portion is substantially rectangular in a direction perpendicular to a cell stacked direction.

11. (Original) The stack structure according to claim 1, wherein the protruding portion protrudes toward an outside of the separator.

12. (Original) The stack structure according to claim 1, wherein the protruding portion protrudes toward an inside of the separator.

13. (Original) The stack structure according to claim 1, further comprising:
a gas passage formed in each of the separators and extends in the cell stacked direction, wherein the protruding portion is formed on a wall surface of the gas passage.

14. (Original) The stack structure according to claim 1, wherein circumferences of the separators adjacent to each other are different.

15. (Original) The stack structure according to claim 14, wherein a curved surface or a chamfer is formed on an end surface of each of the separators.

16. (Original) The stack structure according to claim 1, wherein the end portions of the separators adjacent to each other form a step portion.

17-21. (Canceled)
